Introduction

The Aligates Heritage Range combines classic vertical styling with modern engineering to create a timeless entrance for both traditional and contemporary properties.

Manufactured using premium quality profiles throughout, each gate delivers strength, durability and long term performance. Open sections are formed using vertical 38mm, 65mm or 100mm planks, while lower closed boarded sections are available in 100mm or 150mm boards arranged vertically, horizontally or diagonally.

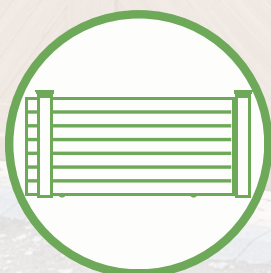

Optional enhancements include stainless steel house names and laser cut panels. Please refer to our Finishes Brochure for colour and finish options.

Configurations

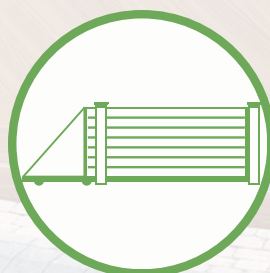

Designed for flexibility, the Heritage Range is fully customisable in colour and configuration. Available gate options are shown below.

Swing Gate

Sliding Gate

Cantilever Gate

Pedestrian Gate

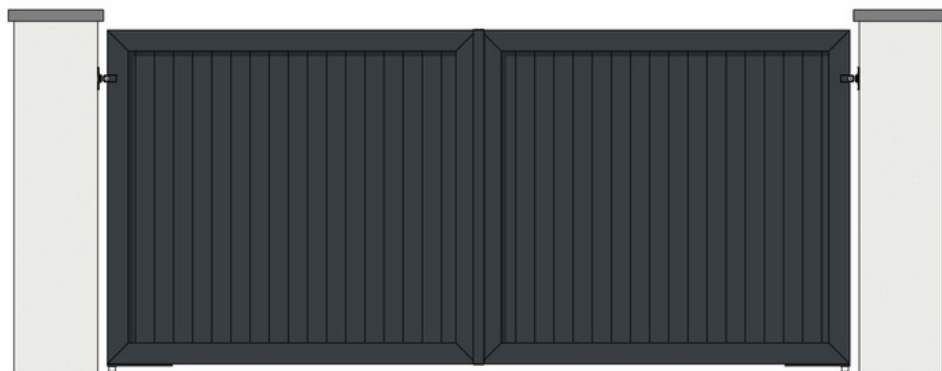

Swing gates can be supplied with or without a horizontal cross rail, allowing alignment with existing RAM automation where required.

Manual swing gates are fitted with integrated locks and drop bolts as standard.

Automation preparation is available for swing gates, including RAM preparation with concealed reinforcement at fixing points, or underground preparation with reinforcement within the bottom gate frame for the underground shoe.

Additional 150mm support posts are available in cast-in or bolt-down options. Bolt-down posts are not recommended for swing gates. For further configuration options and site-specific advice, please contact your installer.
